

Git commands

Git is an open source, distributed version control system designed for speed and efficiency

Agenda

- Git Basic Commands
- Git ignore
- Sublime Integration
- Notepad++ Integration

Git config : One time setup

- git-config - Get and set repository or global options
- Being a distributed version control system, need to identify current user through config:

```
$ git config --global user.name "username"
```

```
$ git config --global user.email "email"
```

```
$ git --help
```

```
$ git --version
```

Git Working with Local Repository

- Create new directory

- `$ mkdir gitbasics`

- Create a new empty repository

`$ git init` - Create an empty Git repository or reinitialize an existing one

Name	Date modified	Type	Size
 hooks	29-01-2021 07:01	File folder	
 info	29-01-2021 07:01	File folder	
 logs	29-01-2021 07:08	File folder	
 objects	29-01-2021 07:14	File folder	
 refs	29-01-2021 07:01	File folder	
 COMMIT_EDITMSG	29-01-2021 07:11	File	1 KB
 config	29-01-2021 07:01	File	1 KB
 description	29-01-2021 07:01	File	1 KB
 HEAD	29-01-2021 07:01	File	1 KB
 index	29-01-2021 07:17	File	1 KB

Git : Workspace

Git Working with Local Repository

- Add files

Create files using favourite editor and save in current directory

```
$ touch File1.html
```

```
$ "File 2 created">File2.html
```

Git : Workspace

Git Working with Local Repository

- Stage / Index files - Add file contents to the index, enable tracking of file contents

```
$ git add .
```

- Show the working tree status

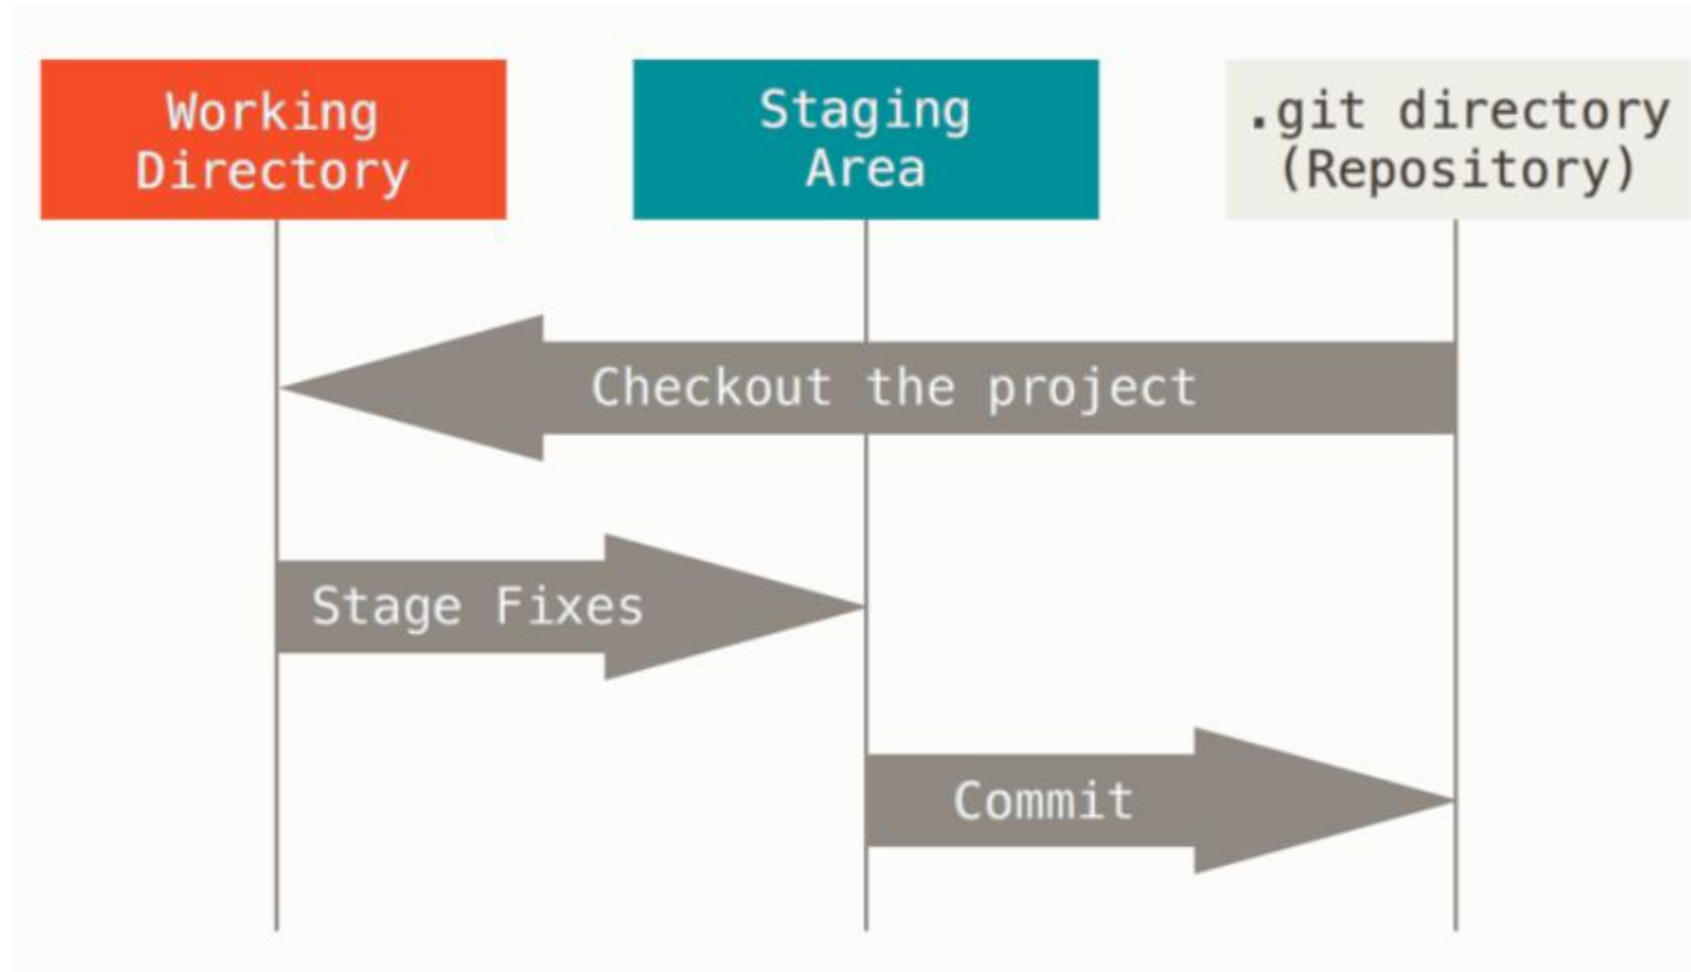

```
$ git status
```

- Commit changes and Record changes to the repository

```
$ git commit -m "Initial change!"
```

Git : Workspace

Understanding History - Commits

- Every change in the history of a project is represented by a commit. The `git-show(1)` command shows the most recent commit on the current branch:

`$ git show`

`$ git log`

- Every commit (except the very first commit in a project) also has a parent commit which shows what happened before this commit. Following the chain of parents will eventually take you back to the beginning of the project.

Tracking Changes

- `git add File2.html`
- “File 2 changes”>>`File2.html`
- `git restore`
- `git diff`
- `git commit -a -m “commit multiple files”`

Ignoring files

- Update .gitignore
- *.class
- git log

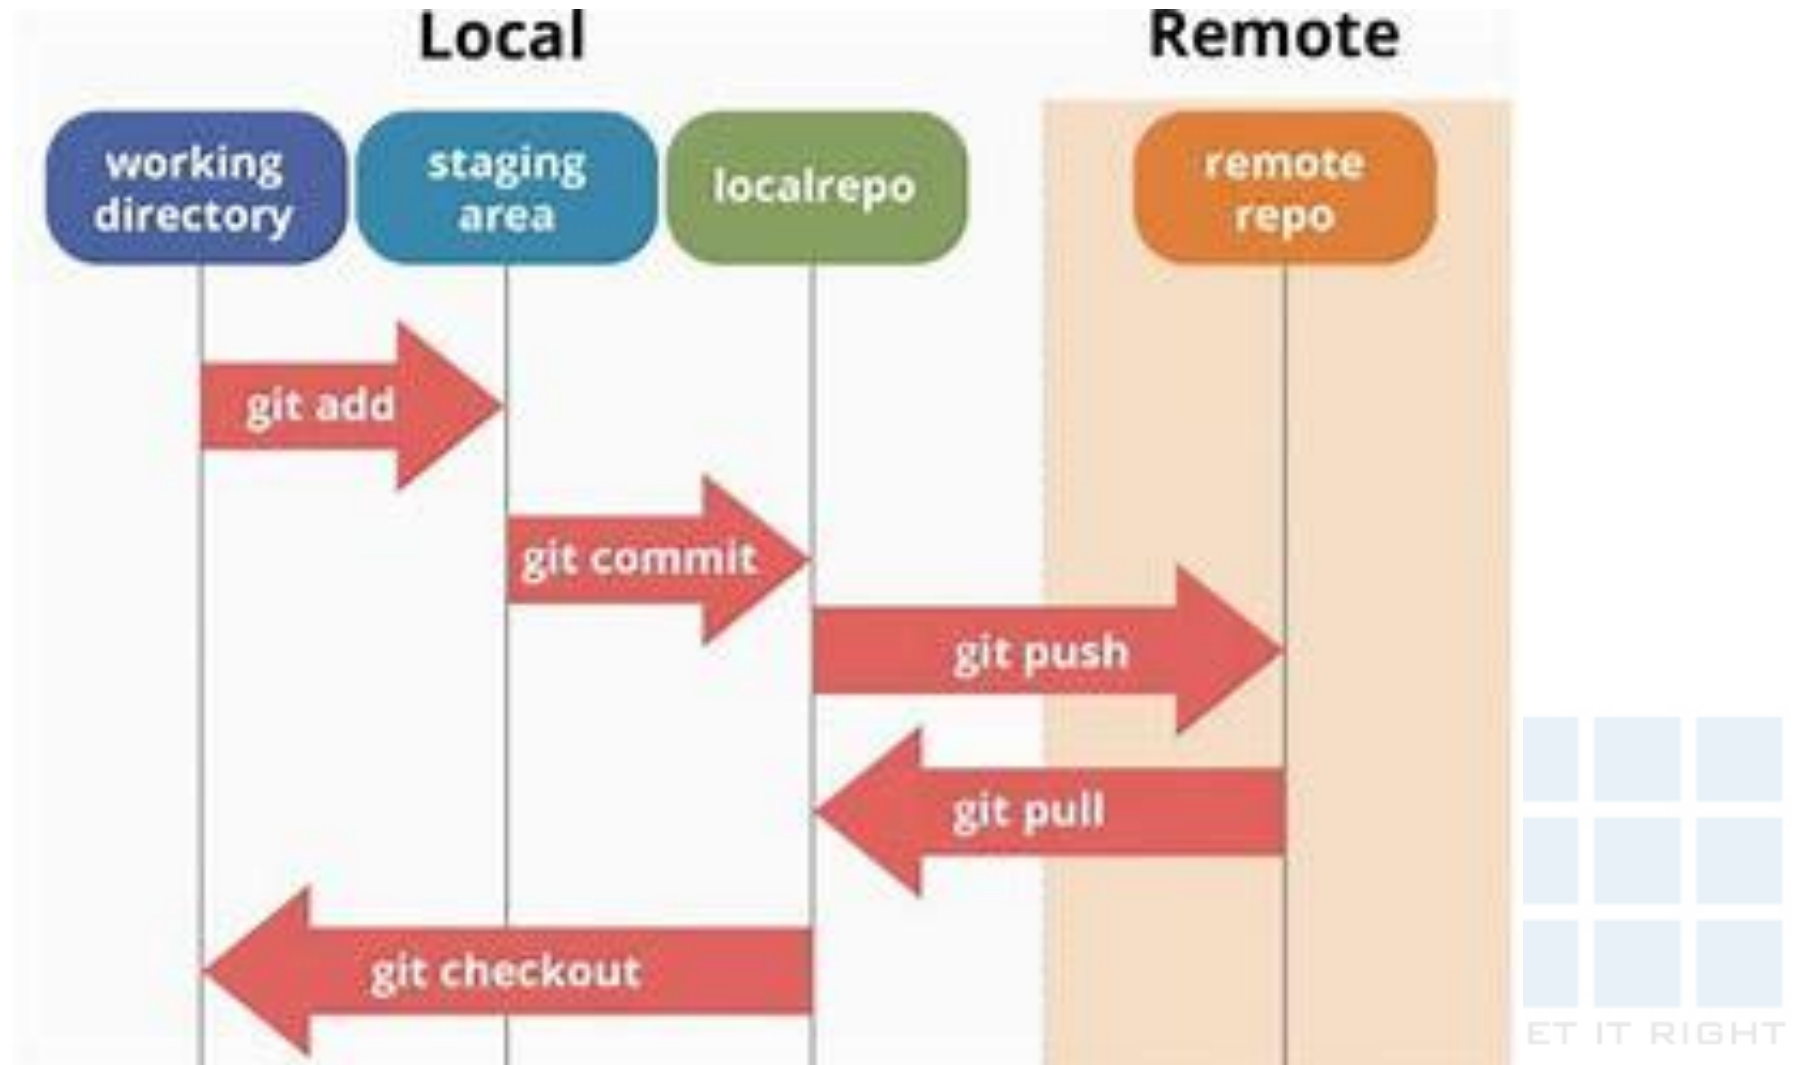

Git Hub Registration - Remote Repositories

- A hosted service for remote git repositories.
- Unlimited PUBLIC repositories for Open source projects.
- Widely popular with Open Source community.
 - Even Linus Torvalds has complete Linux Kernel source on GitHub!
- Visit <https://github.com>

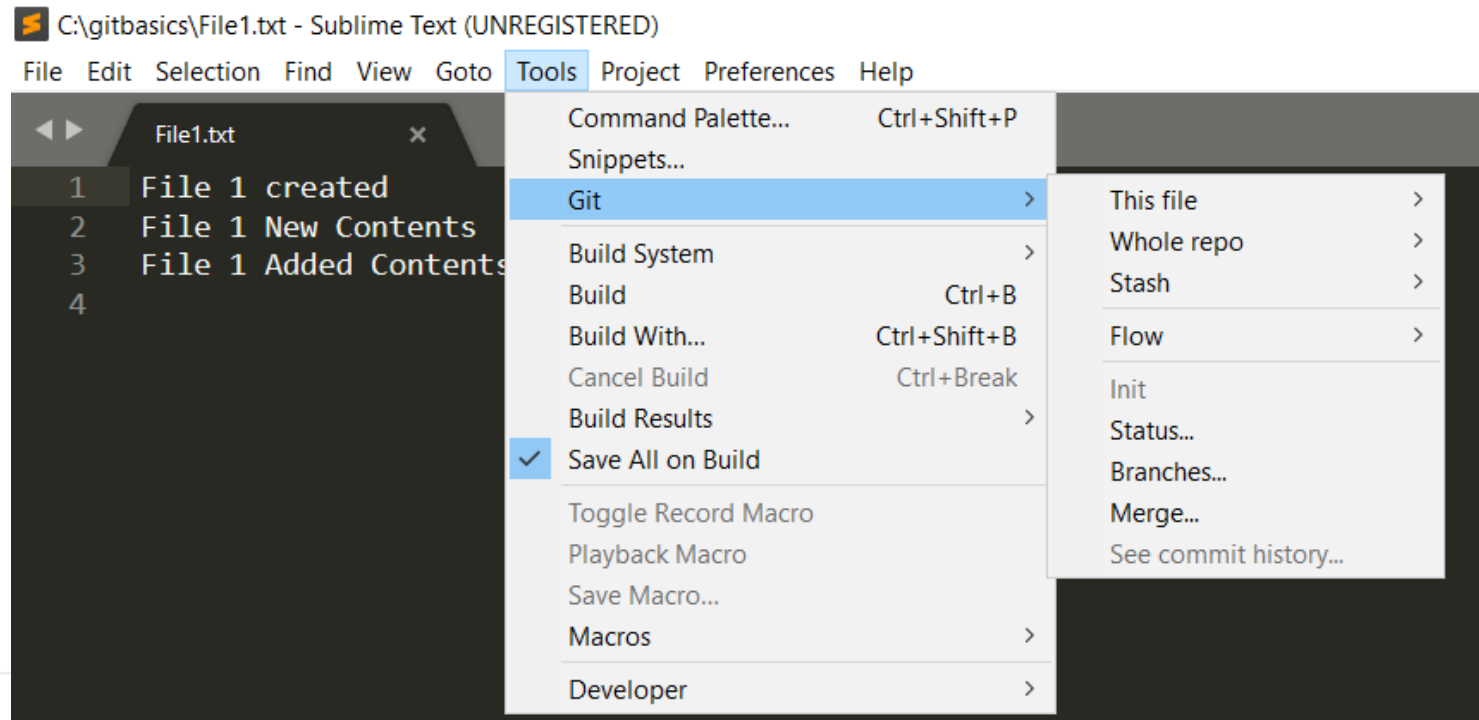

Git File Workflow

Sublime Text Download

- Sublime Text Download
 - <https://www.sublimetext.com/3>
- Tools-> Command Palette
 - Install Package git
- Sublime Merge Download
 - <https://www.sublimemerge.com/download>

Notepad++ Download

- Notepad++ Download
 - <https://notepad-plus-plus.org/downloads/>
- Adding Git Plugin
 - Plugins -> Plugins Admin -> Git SCM
- Note - Works only with Tortoise Git

Thank you
