

## 1 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

1. Create maven-based web project in the eclipse
2. Add the project to git local repository

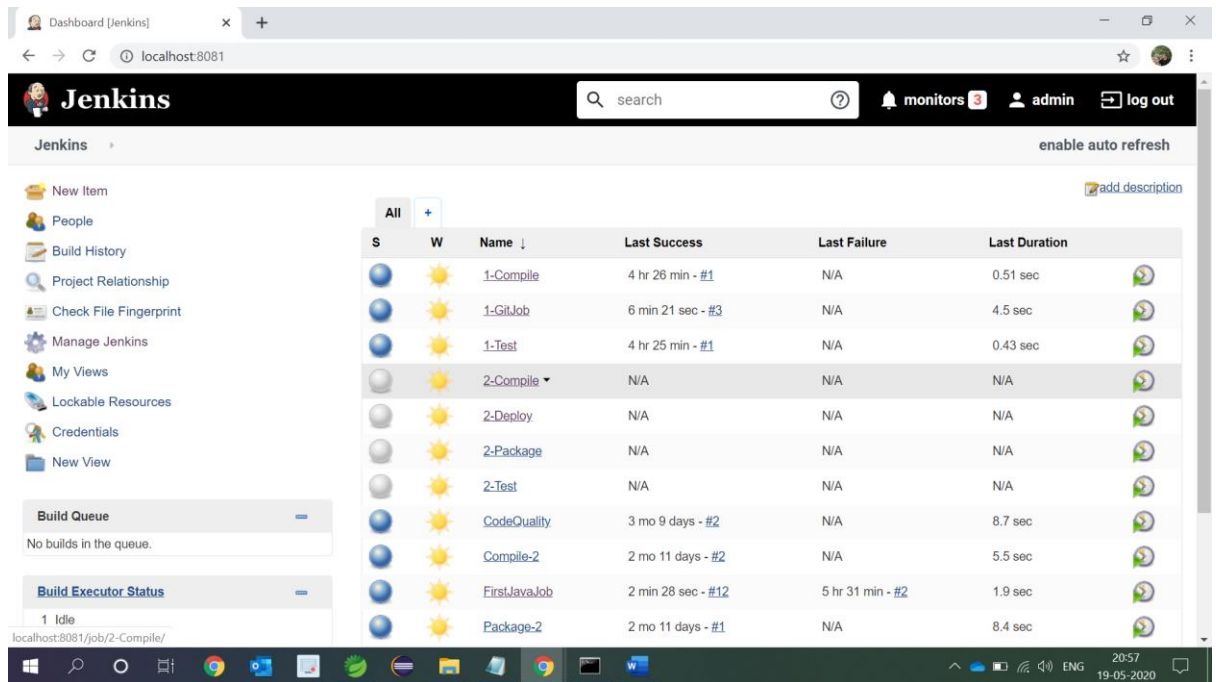

3. Right click on project → Team → Commit... Then "Commit and Push"

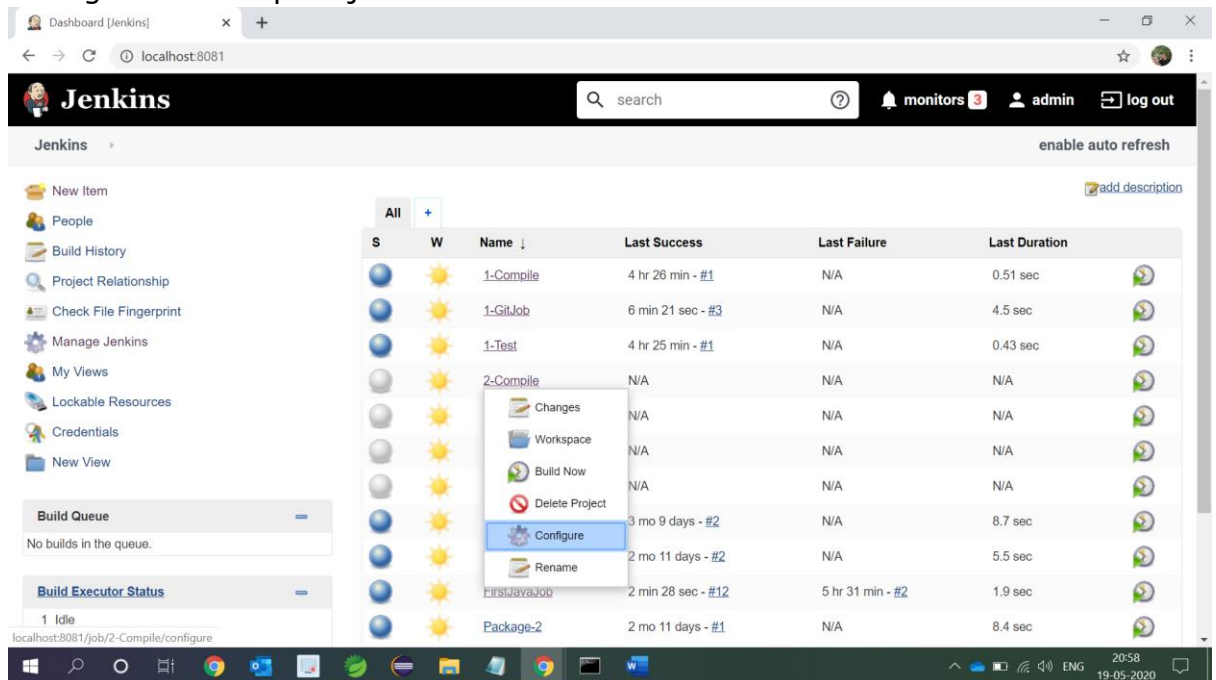

4. Switch to Jenkins and create 4 new job "2-Compile", "2-Test", "2-Package" and "2-Deploy" as "Freestyle project"

## 2 Jenkins Guide with Makarand- Pipeline (Compile→Test→Package→Deploy)

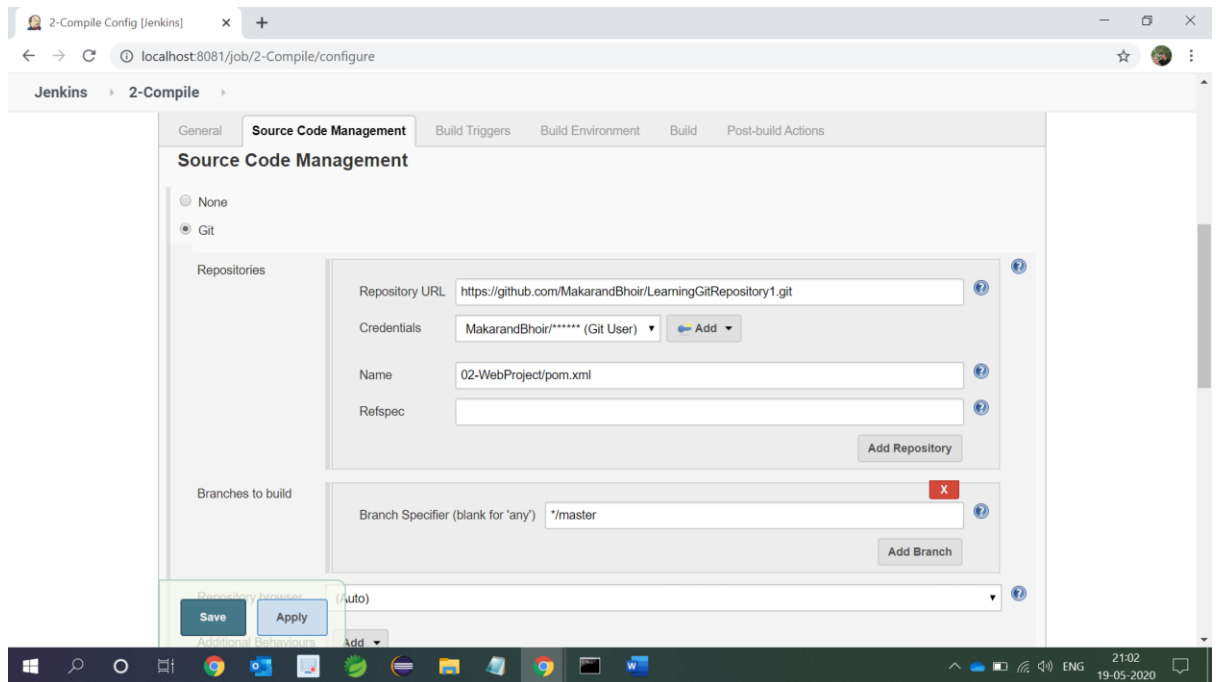

### 5. Configure "2-Compile" job

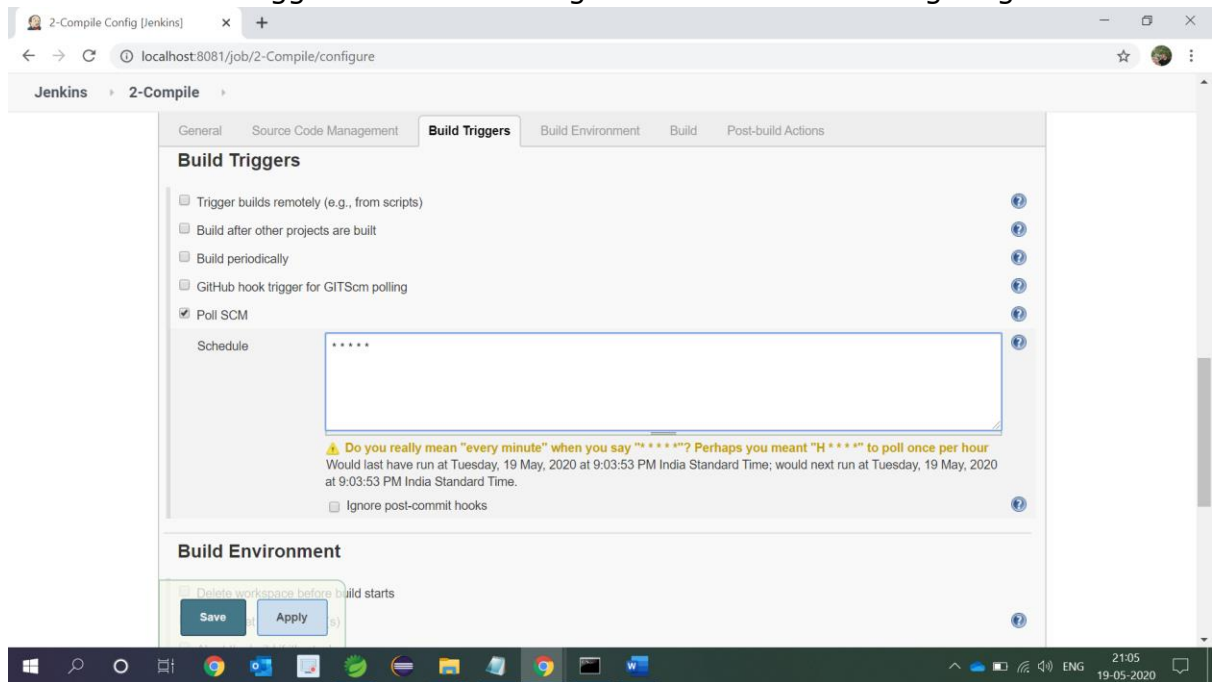

### 6. Go to "Source code management" section → Enter git repository URL → Enter git credentials → Advance → ProjectName/pom.xml

### 3 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

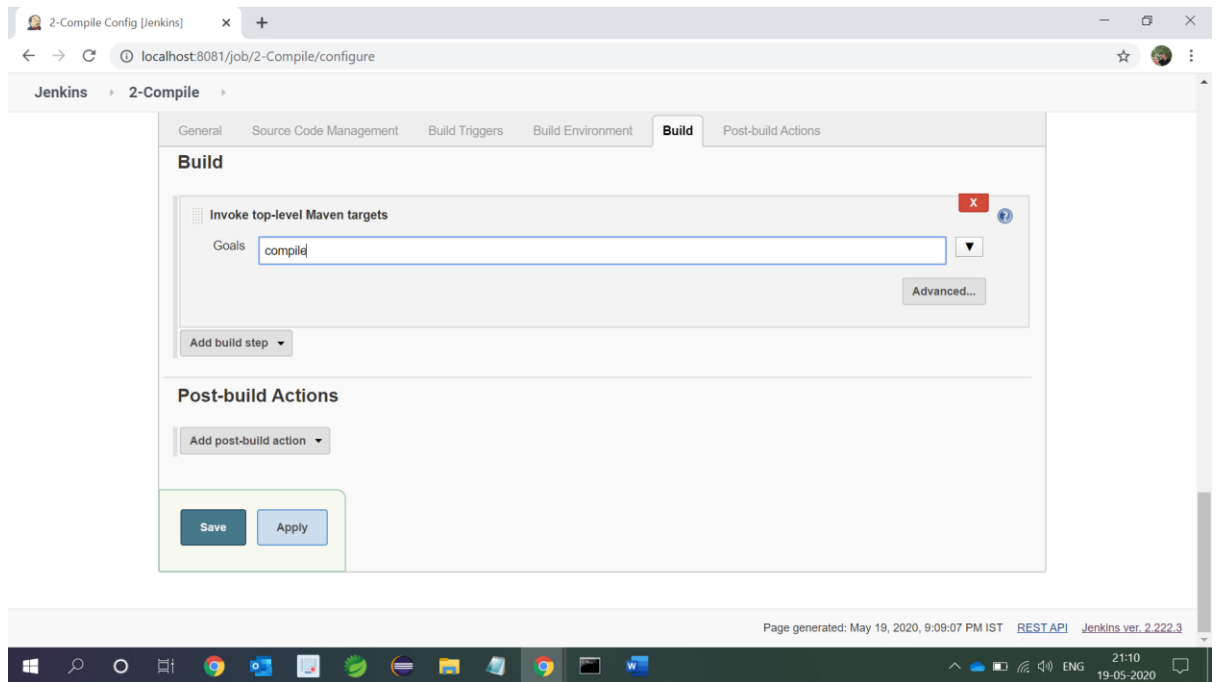

7. Click on “Build Triggers” tab and configure as show in following diagram

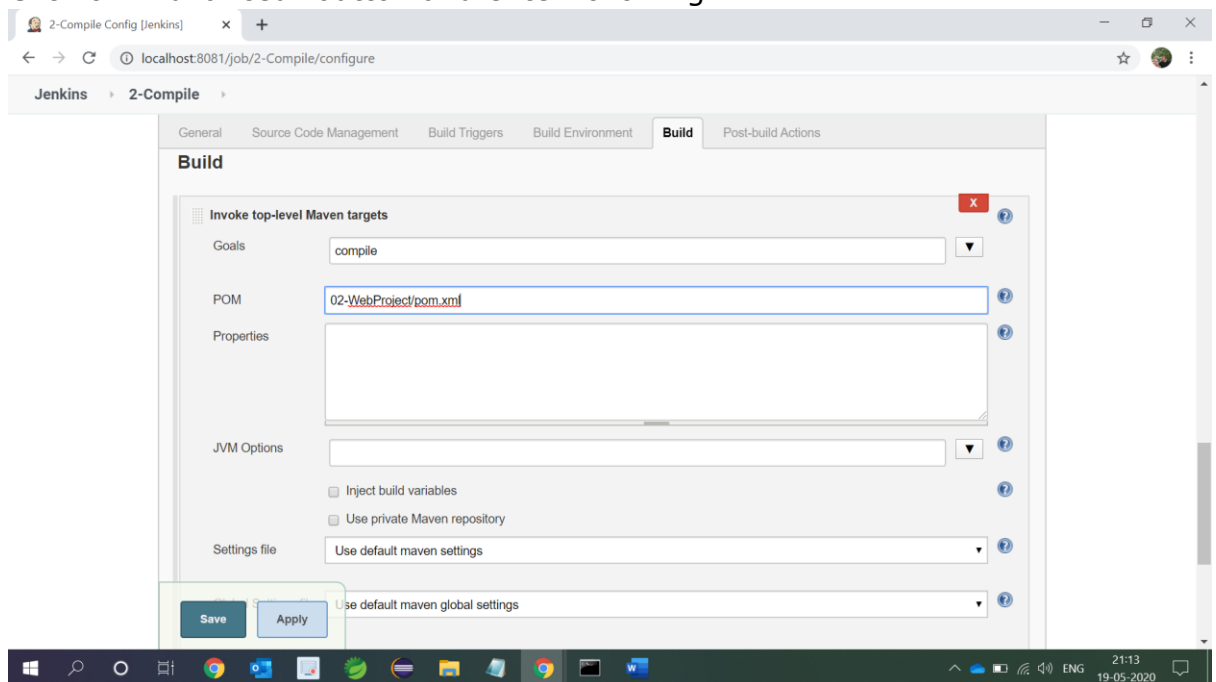

8. Click on “Build” tab → “Invoke top level Maven target”

## 4 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

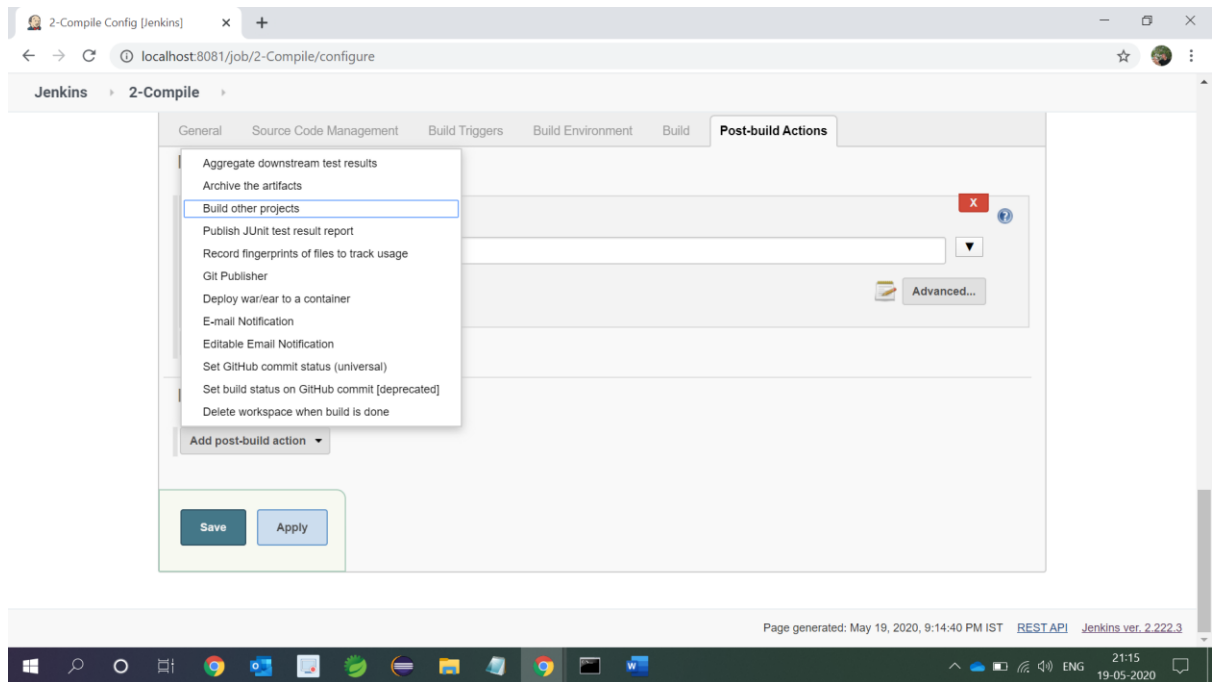

9. Click on “Advanced” button and enter following

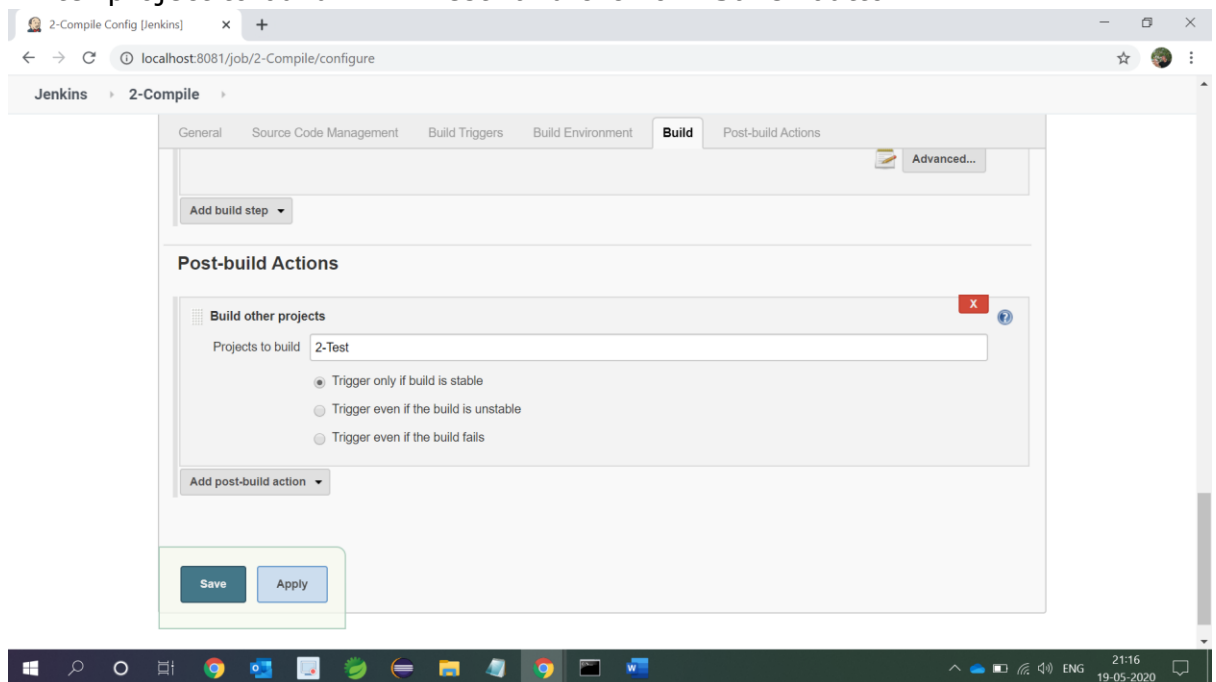

10. Click on “Post-build Actions” tab → Build other project

## 5 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

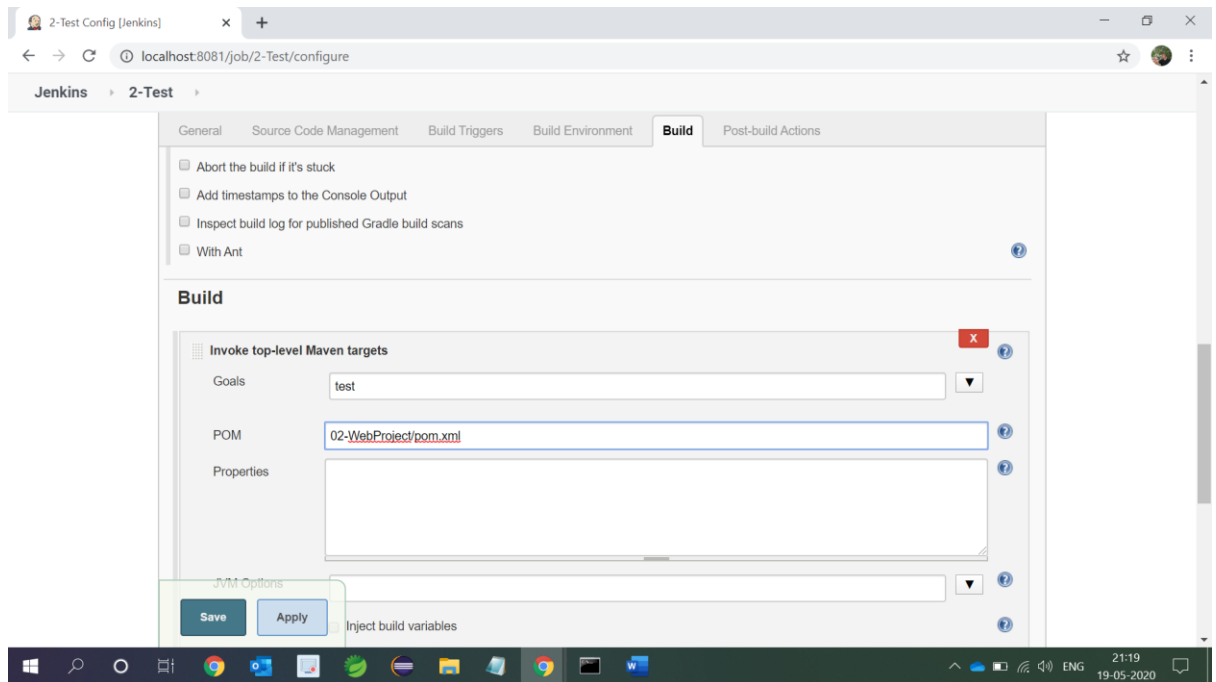

11. Enter project to build → "2-Test" and click on "Save" button

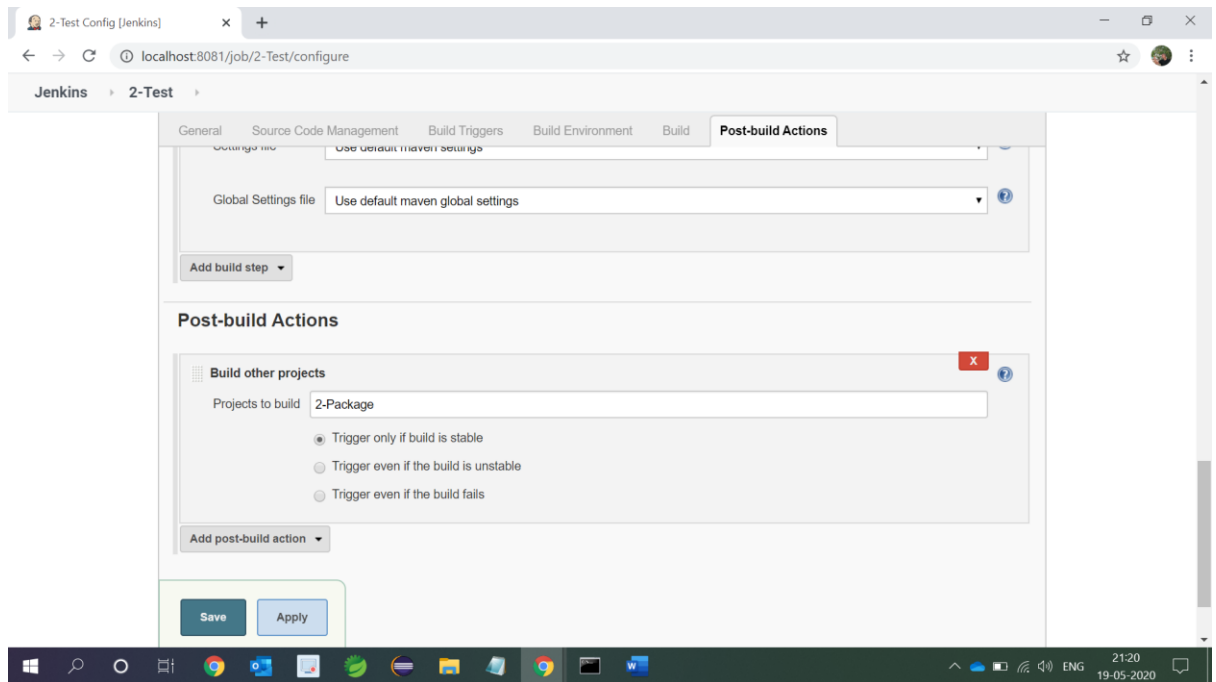

12. Go to "Source Code Management" tab and add same git url

13. Next, configure "2-Test" job → Click on "Build" tab and do following configuration as shown in diagram

## 6 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

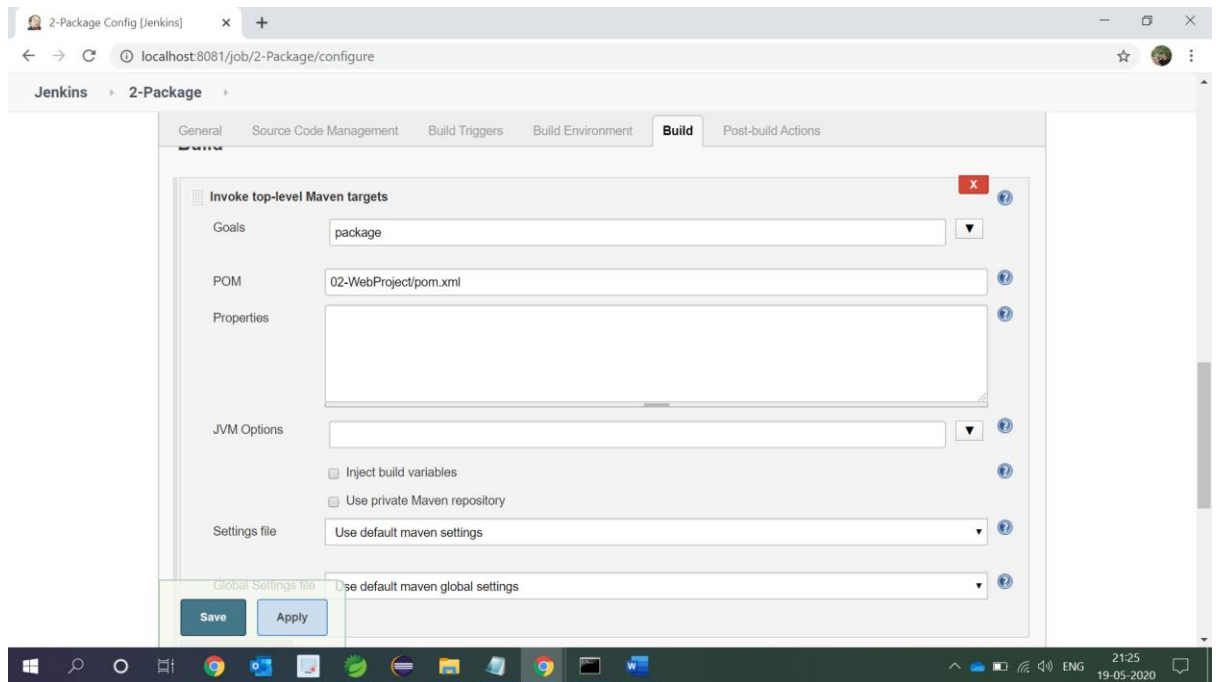

### 14. Click on "Post-Build Actions" tab

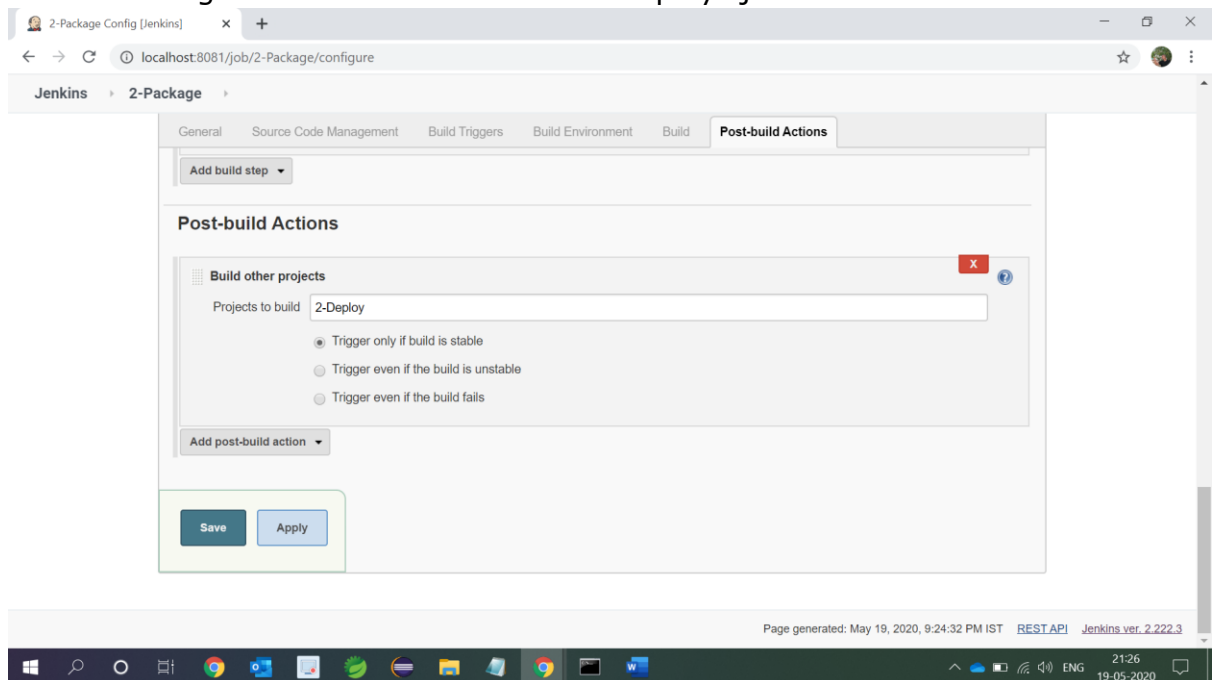

### 15. Just like "2-Test" job repeat steps for "2-Package" job

## 7 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

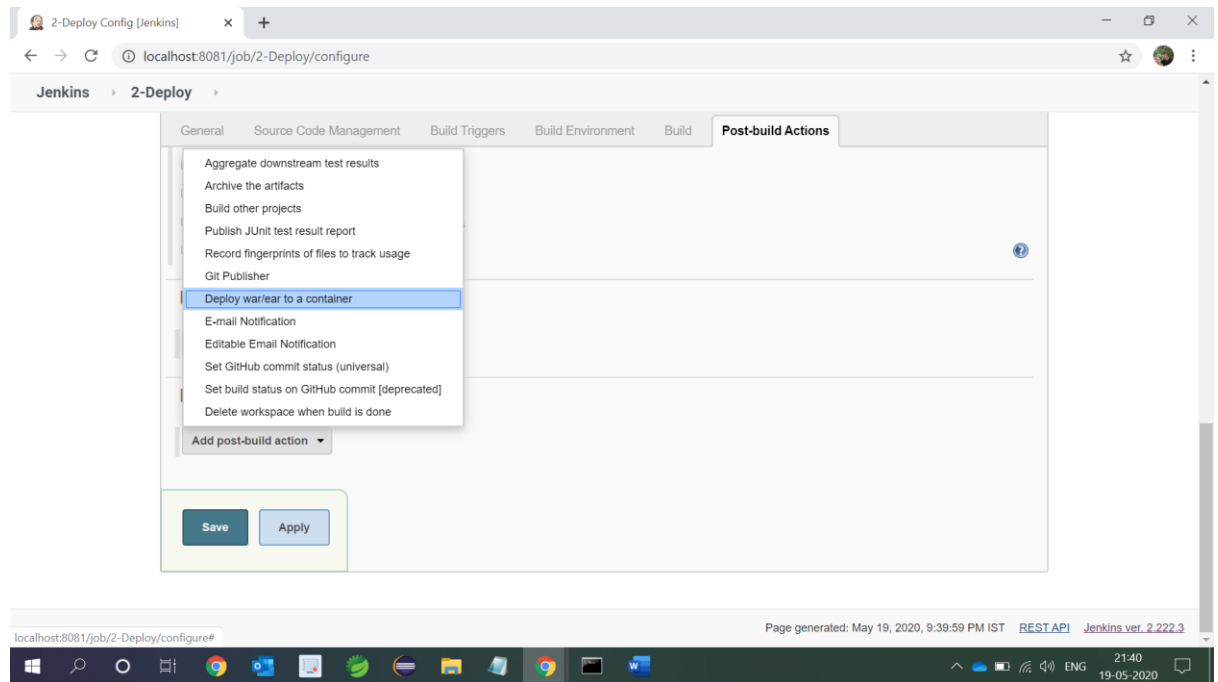

16. Go to "Source Code Management" tab and add same git url

17. For "2-Package" Post-build Action set "2-Deploy" job

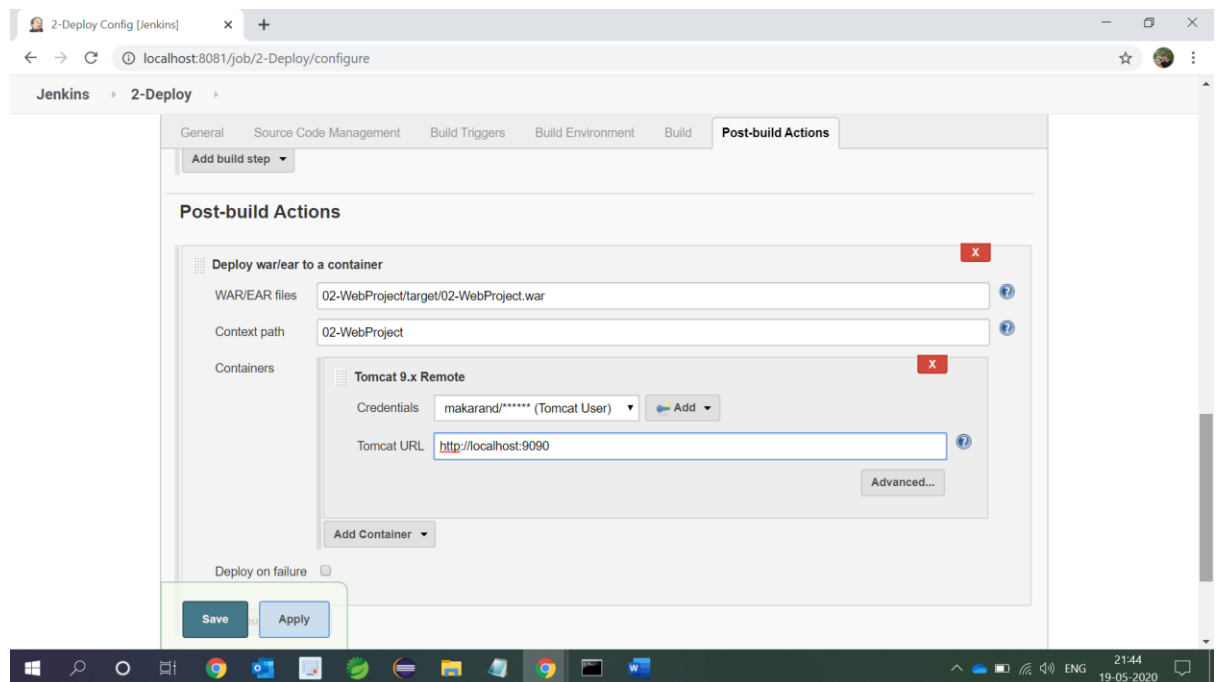

18. Configure "2-Deploy" job → Post-build Action → Deploy war/ear to a container. (You should have "Deploy to container" plugin)

## 8 Jenkins Guide with Makarand– Pipeline (Compile→Test→Package→Deploy)

19. Enter the configuration as specified in following diagram

20. Go to "Source Code Management" tab and add same git url

21. Our pipeline created now go and add/modify file in your 02-WebProject into the eclipse and push it to the git

22. Pushing to Git → will trigger 2-Compile → 2-Test → 2-Package → 2-Deploy → War file will be deployed to the tomcat server
